Gonzales County reports 5th case of COVID-19

Gonzales County is reporting the 5th case of COVID-19, the disease caused by the new coronavirus, in a county resident. The individual was hospitalized but later passed away. It has been determined that this case is associated with community spread of the virus.

Given the increases in community spread throughout the United States, all individuals are at some risk of exposures to COVID-19. Everyone should monitor themselves for symptoms of COVID-19, practice social distancing, and stay home if they become sick, except to seek necessary medical care. The Texas Department of State Health Services is supporting Gonzales County in identifying any close contacts of the patient, so they can be isolated, monitored for symptoms, and quickly tested, if needed.

Gonzales County now has 5 confirmed positive COVID-19 cases at this time.

Out of the 5 cases: 1 has recovered,
 2 are quarantined at home being monitored with mild symptoms,
 2, unfortunately, have resulted in death.

Our thoughts and prayers go out to the families involved.

Now that we are dealing with community spread of this virus we need to be extremely cautious and follow the following guidelines as listed below.

There are things everyone can do to help prevent the spread of COVID-19:

- Wash your hands often with soap and water for at least 20 seconds. If soap and water are not available, use an alcohol-based hand sanitizer.
- Avoid touching your eyes, nose and mouth with unwashed hands.
- Avoid close contact with people who are sick.
- Stay home when you are sick.
- Cover your cough or sneeze with a tissue, then wash your hands.
- Clean and disinfect frequently touched objects and surfaces.

Minimizing exposure is especially important for people who are 65 or older or who have an underlying health condition like heart disease, lung disease, diabetes, high blood pressure or cancer. People in those groups have a higher risk of developing severe disease if they do get COVID-19, and the

safest thing for them during an outbreak will be to stay home as much as possible and minimize close contact with other people. To get ready, they should talk to their doctor about getting additional prescription medications and have enough household items and groceries on hand to stay home as needed.
